

A scatter plot showing the relationship between Z-score (X-axis) and Z-score (Y-axis) for 1000 genes. The X-axis ranges from -1.25 to 0.50, and the Y-axis ranges from -1.25 to 0.50. The data points are colored by cluster, showing a strong positive correlation between the two Z-scores. The points are distributed along a diagonal line, indicating that the Z-score of a gene is highly predictive of its Z-score in another context.
