

A scatter plot showing the relationship between 'Subject' (X-axis) and a classification variable (Y-axis). The X-axis ranges from 100,000 to 800,000. The Y-axis has four tick marks but no labels. The legend indicates two categories: 'Anomaly' (represented by orange dots) and 'Standard' (represented by blue dots). The 'Standard' data points are concentrated at the bottom of the plot (low Y-values) for subjects between 100,000 and 250,000, and are more widely distributed at higher Y-values for subjects between 400,000 and 800,000. The 'Anomaly' data points are clustered at the bottom of the plot (low Y-values) for subjects between 100,000 and 250,000.
