

A scatter plot showing the relationship between 'Subject' (X-axis, ranging from 100,000 to 850,000) and 'Anomaly' (Y-axis, ranging from 0 to 100). The plot displays two data series: 'Anomaly' (represented by blue dots) and 'Standard' (represented by orange dots). The 'Anomaly' series shows a dense cluster of points at low 'Subject' values (below 200,000) and low 'Anomaly' values (below 20). The 'Standard' series shows a sparse distribution of points across the 'Subject' range, with most points having 'Anomaly' values between 20 and 40. A legend in the top right corner identifies the two series.
